

I am writing to oppose giving SBC the right to sell long distance in Michigan. I know first hand as I have worked for 2 CLEC's in Michigan that they are not opening up their access lines without delays and providing poorer service to their competitors than they do their own customers. There is already excellent pricing in long distance with many providers providing great service it is not needed for fair pricing or competition, as SBC would have you believe. Allowing SBC to provide long distance will certainly set back the competitive local service in Michigan if not destroy it.
